A | Direct action: privileged teacher -> adaptation -> student
Adaptation MLP
predict privileged latent
(optional target prediction)
predicted latent / optional target
Public state/history + GT force
Student actor
no external joint target
joint actions
Joint-position action -> PD -> robot
No frozen motion tracker
copy actor weights
phase 1 rollout action
Teacher actor
PPO dense tracking
train
latent / optional direct target
Privileged encoder
+ optional direct target channel
latent supervision
train
Latent / optional direct-target MSE
then student PPO fine-tuning
Training-only privileged state
and motion joint target
